

Find and unhide hidden items

Something missing from a page? It may be hidden on that screen size. Here is how to find hidden items and show them again.

If a button, photo or section you remember isn't on the page, it may be hidden on the screen size you're looking at. Hidden items aren't deleted. You can show them again in a few clicks.

Before you start

Switch to the screen size where the item is missing, using the device icons in the editor. Showing an item only changes the screen you're currently editing.

Steps

1. Log in to your site editor and open the page.
2. In the side panel, click **Layers**.
3. Find an item with an eye icon that has a line through it. That means it's hidden on this screen size.
4. Click the crossed-out eye. The item shows again.
5. Switch to the other device views and check them.
6. Publish. If you don't see a **Publish** button, tell us and we'll publish it for you.

If an item is hidden on only some screens

You can also use the item's own menu. Click the item, click the three dots icon in the small menu, and click **Hide from**. Or right-click the item and click **Hide from**. The screens where it's hidden are marked in orange. Click one of them to show the item there.

An item that is hidden on all screens, or on the screen you're editing, has no menu to click. For those, use **Layers**.

Tips

- If you can't find an item on any list, it may have been deleted rather than hidden. See [Undo a change](#), or ask us to bring it back.
- Hiding is handy when you want something on phones only. See [Hide something on phones or on computers](#).

Need a hand?

Email hello@zossoz.com with your business name, the page, and what's missing, and we'll take care of it. We reply within one business day. See [Request a change](#).
