

Keep the header at the top while visitors scroll

Make your logo and menu stay on screen as visitors scroll, and shrink the header so it takes up less room.

A sticky header stays in view while visitors scroll down the page, so your logo and menu stay in view. On a long page, nobody has to scroll back up to find them.

Keep the header in place

1. Log in to your site editor.
2. Hover over the header and click **Header**.
3. Click **Edit Design**.
4. Open the **Position** section.
5. Turn on **Set as sticky header**.
6. Check the computer, tablet and phone views. Turning it on for one size affects the others.
7. Publish. If you don't see a **Publish** button, tell us and we'll publish it for you.

Make it shrink as visitors scroll

A shrinking header gives up some height after the visitor scrolls, so it covers less of your page. Sticky has to be on first.

1. In the **Position** section, turn on **Change header on scroll**.
2. Set how it looks:
 - **Padding**: the space above and below at the start.
 - **BG on scroll**: the background color and how see-through it is.
 - **Spacing on scroll**: the space above and below once it shrinks.
 - **Logo size**: how small the logo gets when the header shrinks. The standard is 66 percent.
 - **Show only nav section on scroll**: keeps only the menu row visible. Only available on advanced headers.
3. Publish.

Good to know

- Not everything in a header can shrink. Menus, logos, buttons, social icons, call and email buttons, and title and paragraph text do. Anything else may show as a blank gap.
- You won't see it work on a short page that doesn't scroll. Test on a longer page.
- Look at the phone view to be sure the header isn't taking up too much room.

Need a hand?

Email hello@zossoz.com with your business name and whether you'd like the header sticky, shrinking or both, and we'll take care of it. We reply within one business day. See [Request a change](#).
